Portfolio manager: Michel Pelletier

Benchmark: FTSE/TMX Universe

Management fees and operating costs: 1,10 %

Investment Objective

The fund aims to provide high current earnings and produce long-term capital appreciation by investing primarily in Canadian fixed-income securities.

This fund focuses on long-term relative performance, compared to the FTSE-TMX index for Canadian bonds and is designed for investors with mid-term to long-term investment horizon.

Investment Process

The fund's assets are invested in a diversified portfolio consisting primarily of investment-grade federal, provincial, municipal and corporate bonds (with BBB credit rating or higher) and denominated in Canadian dollars.

In order to add value relative to the benchmark, the manager uses a top-down approach to optimize fund positioning, based on economic and sectoral outlook and individual issuers.

The first level of analysis conducted on the economic outlook aims to capitalize on interest rate movements by implementing strategies and tactics for managing duration and positioning on the interest rate yield curve. The next two levels of analysis are based on sectoral outlook and issuers and aim to establish relative value strategies.

Quarterly comments

- Market volatility is back
- Short-term rates should raise
- Yield curves is flattening
- The strategy overweights municipal bonds
- Central banks seek to normalize interest rates
